Metaller

Gustaf Trotzig
190 x260 mm, 320 p

By skilled hands objects were made – hands blackened by dust and oxides.

When you see a metal craftsman using tools that were developed long before the birth of Christ, it is evident that connections can be found between the craftworkers of today and those of the past. The unique pictures in this book allow us to look at beautiful and functional crafts that capture both the mind and imagination, whether they were made a thousand years ago - or today.

Metals, Craftworkers, and Archeology: From Now back through Antiquity. is a book that will inspire and stimulate both craftworkers and scientists. The emphasis is on Swedish finds from the early Middle Ages and the Iron Age with excursions to other countries and epochs. The book ends with a comprehensive dictionary of English translations for Swedish craft terms and an extensive list of other books on the subject.

About the Author

Gustaf Trotzig is professor emeritus of Archaeological Science. He has deep academic as well as practical knowledge of metal crafts and has taught students at the Archaeological Research Laboratory of Stockholm University and lectured on craft education at Säterglätan school.
